Act-frequency signatures of the Big Five

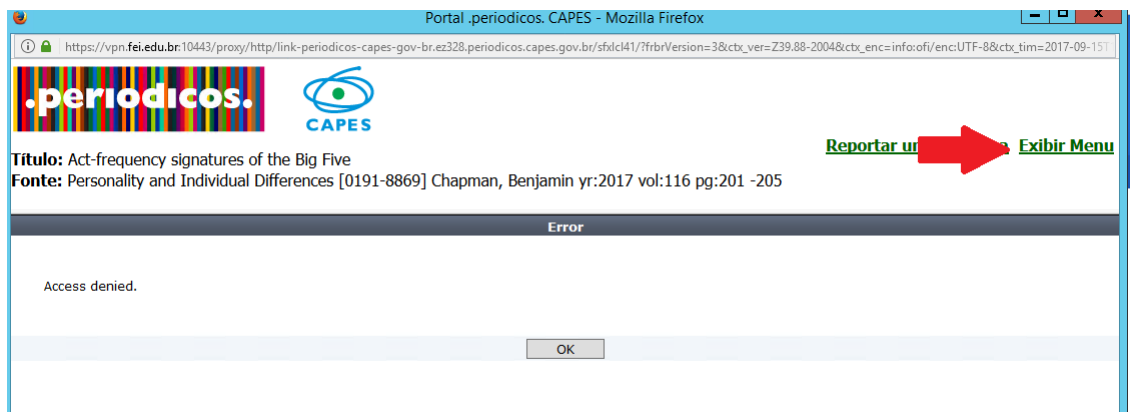

Chapman, Benjamin P. ; Goldberg, Lewis R. Personality and Individual Differences, 1 October 2017, Vol.116, pp.201-205 [Periódico revisado por pares]

The traditional focus of work on personality and behavior has tended toward "major outcomes" such as health or antisocial behavior, or small sets of behaviors observable over short periods in laboratories or in convenience samples. In a community sample, we examined a wide set (400) of mundane, incidental or "every day" behavioral acts, the frequencies of which were reported over the past year. Using an exploratory

Highlights

- We explored Big Five associations with a large range of "everyday" behavioral acts.
- Small subsets of acts were highly associated with each Big Five dimension.
- Some are congruent with intuitive perceptions of a Big Five dimension.
- Others were quite specific and novel.
- Act frequency metrics for Big Five levels were estimated.

Abstract

The traditional focus of work on personality and behavior has tended toward
